pH Flow-Through Cells

1 PH SENSOR SPECIFICATIONS

Only valid in physiological solutions (ionic strength = 150mM) at 25°C for 2-point calibrated sensors. Specifications are valid for pH flow-through cells (item no.: **PHFTCR-PK5**, **PHFTCR-PK6**, **PHFTCR-PK7**, **PHFTCR-PK8** and **PHFTCR-PK8T**).

1.1 General Characteristics

Response Time (t_{90}) at 25°C*	<60 sec
Temperature Range	5°C (41°F) to 50°C (122°F)
Tubing Connectors (Luer-Lock)	ID tubing 3.2 or 4.8 mm
Recommended flow rate	20-500 mL/min
Influence of Salinity‡	Specified for measurements between 20-500 mM ionic strength. Response time and accuracy at lower or higher salinities are not specified. Rough compensation is enabled in the software.
Calibration Modes	2-point calibration
Calibration Solution	PyroScience buffer capsules or a self-made buffer (details on request) must be used
Background Fluorescence	Minimized due to REDFLASH technology
Optical Isolation	The sensor is equipped with an optical isolation to minimize interference from strong external illumination and light-sensitive / fluorescent samples.
Application Areas	Laboratory, industry, research. NOT for medical or any safety-critical application. NOT for application in humans. NOT for application in food intended for human consumption.

* time for 90% of the total sensor signal change in stirred media

‡ PK8T versions are specified for measurements between PSU 30-40
